The number of days after a password expires until the account is permanently disabled. A value of 0 disables the account as soon as the password has expired,
Example: -K PASS_MAX_DAYS=-1 can be used when creating system account to turn off password aging, even though system account has no password at all. Multiple
-p, --password PASSWORD
The encrypted password, as returned by crypt(3). The default is to disable the password.
Note: This option is not recommended because the password (or encrypted password) will be visible by users listing the processes.
You should make sure the password respects the system's password policy.
The number of days after a password has expired before the account will be disabled.
Maximum members per group entry. When the maximum is reached, a new group entry (line) is started in /etc/group (with the same name, same password, and same
The maximum number of days a password may be used. If the password is older than this, a password change will be forced. If not specified, -1 will be assumed
The minimum number of days allowed between password changes. Any password changes attempted sooner than this will be rejected. If not specified, -1 will be
The number of days warning given before a password expires. A zero means warning is given only upon the day of expiration, a negative value means no warning
Shadow password suite configuration.
can't update password file
